

# Protect your devices. Always.

## See how McAfee Multi Access can help

### All your important information. Safe and secure.

In the last few years there's been a huge shift away from paperwork to digital records. Even for the smallest businesses, a lot of work can come through email. Running a small business from home can be more reliant on IT than ever before.

Perhaps you use laptops at work and rely on smartphones to keep up with emails when you're out and about? Or work on tablets simply for convenience and ease of use.

To protect your clients' data, you'll need a simple way to keep all your devices safe from spam and phishing emails. And be alerted to potentially risky websites. And keep all your passwords safe too.

### How can we help?

We've already searched, tried and tested the leading cyber security options out there. It's how we know that McAfee Multi Access is the best option for business. We can help you get set up, offer our ongoing support and, if you need more devices, we can help with that too. It's best suited to companies with up to 20 employees.

### Who can I talk to?

To find out more, speak to your **account manager**.

### How can you benefit?

#### Protect against costly cyber security breaches.

Statistics show even small and medium-sized businesses have their security breached. Preventing this risk with a low monthly subscription makes business sense. And far less costly than fixing afterwards.

#### Cover all devices.

McAfee Multi Access covers all devices, except Windows Phones and BlackBerry smartphones. With your first subscription you can protect up to five devices. And if you need to cover more than five, you can buy a further licence for each additional device.

#### Stop spam and phishing emails.

With so much of work done over email, keeping your inboxes free of junk mail, as well as anything possibly harmful, is a really good idea.

#### Manage all your passwords. Securely.

More devices mean lots of passwords. It's not only confusing but can mean lots of ways in for potential problems. With McAfee you can create one master password that's synced across all your devices.
